eyeOS 0.8.4 Multiple Vulnerabilities

Release date: October 31, 2005

Date Discovered: October 16, 2005

Severity: High

Vendor: eyeOS

Vulnerable Software: eyeOS 0.8.4

Overview:

EyeOS is a free, cross-platform Personal Content Management System based upon the style of a Desktop Operating System.

Version 0.8.4 lacks any data validation and is vulnerable to Cross Site Scripting attacks to allow attackers to achieve administrative privileges in the application.

It also stores password information in a predictable, publicly accessible location.

Solution:

Upgrade to latest eyeOS release.

Vendor Solution:

A patch/upgrade is necessary to provide validation of user input and access control to user credentials.

Vendor Status:

eyeOS was notified and a patch is available.
